

Subject index

a

- absinthin 278
 - wormwood, isolation from *Artemisia absinthium* L. 277
- acetic acid
 - synthesis of 42, 921
 - dianion of 301
- acetic acid side chain
 - by alkylation of ketones 314
 - mild hydrolysis of 698
- α -acetoxy ketone
 - reduction of, with zinc 546
- acetylation
 - lipase-catalyzed 440
- (+)-acetylcephalotaxine 656
- acetyl-CoA 802
 - in biosynthesis of cephalotaxine esters 657
- acetylenes
 - hydroboration of 379
- acetylgynuramine 619
- 3-acetyl-2-piperidineine
 - acylation with methyl chloroformate 770
 - by hydrogenation of 3-acetyl-pyridine 770
- 3-acetylpyridine
 - hydrogenation of 592, 593, 770
 - in indole alkaloid synthesis 195, 196, 771, 776
- aconitine 530, 531, 847, 848
- acoradiene
 - acid-catalyzed cyclization to cedrene 236
- acorane–cedrane interconversion 237
- acoranes
 - biogenetic relationship to zizaenes 255
- acrylates
 - reduction of, with magnesium in methanol 442
- acrylic acids
 - hydrogenation of 111
- acyl anion equivalent
 - generation of 862, 864
 - in maytansine synthesis 857
- acyl anion synthons 188
- acylation
 - of enamine with mixed anhydride 662
- N*-acylhomomeroquinene 534
- acyliminium cyclization 579
- acyloin condensation 661
 - Ruhlman modification 662
- aclypyridines
 - hydrogenation of 771, 784
- 3-aclypyridines
 - hydrogenation to vinylogous amide 592
 - in general method of synthesis 195, 196, 593
- 3-aclypyridinium salts
 - acid-catalyzed cyclization of 593, 782
 - in alkaloid synthesis 195, 196, 592

- N*-acyl vinylogous urea
 - attachment of, in palytoxin synthesis 901
- Adam's catalyst 260, 375, 376, 397, 609, 626
 - hydrogenation of limonene 399
- aflatoxin 847
- aflatoxin B₁ 846
- β-agarofuran
 - synthesis 113
- AIDS
 - treatment of 910
- ajmalicine 541, 542, 761
 - in biosynthesis of indole alkaloids 762
- ajmaline 541, 542
- alcohol dehydrogenase
 - in desymmetrization of meso diols 117
- alcyonin 5
 - structure revision 4
- aldehyde synthesis
 - by hydrolysis of *gem*-dichloride to 782
- aldolase
 - in enzymatic aldol condensation 116
- aldol condensation 48, 292, 451, 453, 462, 664, 766
 - asymmetric 55, 56
 - in damsine synthesis 305, 306
 - intramolecular 306, 583, 776
 - in aspidospermidine synthesis 776
 - in zizaene synthesis 261
 - transition state model 57
- alexine 639, 641
- alizarin
 - synthesis 41, 42
- alkaloid
 - origin of the word 527
- alkaloids 5
 - chronology of isolation 528
 - general methods of synthesis 767
- β-alkoxyketone synthesis 854
- alkylation
 - α vs. γ control 168, 259, 260
 - C vs. O control 168
 - C vs. O vs. N control 168
 - of carbonyl compounds 167
 - of crotonates 167
- α-alkylation
 - of enone 511
 - of unsaturated ester 608
- α-alkylation vs. γ-alkylation
 - of enones 259, 260
 - of keto ester dianion 435
- 1,4-alkylative dearomatization
 - in cedrene synthesis 234
- alkylative transposition
 - of 1,3-carbonyl 664
- alkyl zinc
 - addition to ketone 484
 - in quassin synthesis 484
- Alloferine® 801
- allyl ether
 - reductive fission of 299
- allylic alcohols
 - by reduction of malonates 316, 317
 - directed hydrogenation of 512
 - from epoxides 485
 - oxidation with MnO₂ 317
 - reductive transposition of 488
 - by reduction of epoxy mesylates 317
- allylic bromination 383
- allylic carbamate displacement 741, 742
 - suprafacial 742
 - with lithiosilanes 741
- allylic epoxidation 508
- allylic oxidation 400, 472, 474, 476, 477, 509
 - chemoselective 310
 - of 1,4-diene to dienone 786
 - of olefin to enone 556, 785
 - with 1,3-oxygen shift 352
 - with retention of olefin regiochemistry 588
 - with selenium dioxide 591
- π-allylnickel complex 319
- allyloxycarbonyl (ALOC)
 - reduction of 182
- allylsilane cyclization
 - of acyliminium ion 627, 743
- Amaryllidaceae* constituents
 - bibliography 721
 - biological activities of 689
 - biosynthesis of 689, 691
 - isolation 689
 - structure 689
 - synthesis of *ent*-series 720
- ambrosin 278
- americanolide 278
- amide reduction
 - via imino chloride 633
- amino cyclitols
 - synthesis of 155

- amino hydroxylation 58
 – asymmetric 641
 aminoindanol
 – from indane *cis*-diol 912
 (+)-(S)-amphetamine 529
 amphidinolide B 871
 – synthesis of 869
 (+)-amphidinolide W
 – synthesis of 869
 – revision of structure 871
 amprenavir 911
 – HIV-I protease inhibitor 910
 androsterone 208
 anionic cyclization
 – of alkoxides to enynes 293
 anionic oxygenation
 – of benzylic carbon 540
 anionic rearrangement
 – of imino esters 633
 α -anion synthons 188
 anisole
 – demethylation of 735
 – oxidative cleavage 576, 579
 annopodine 574
 annotine 574
 annotinine 574
 – synthesis of 588
 – Wiesner's synthesis 590
 [4+1] annulation 104, 406
 – intramolecular of dienic diazoketones 403
 [3+2] annulation
 – in triquinane design 363
 ansa compounds
 – definition of 879
 – history of 879
 ansomytocins 851
 antascomicin A 871
 – synthesis of 869
 antascomicin B 871
 1,4-anti elimination
 – of HBr, in diene synthesis 443
 aphidicolin 213, 449, 453, 454, 455, 463
 – asymmetric formal synthesis of 461
 – bibliography 464
 – biogenetic-type synthesis 456
 – biological activity of 449
 – biomimetic approaches to synthesis 451
 – disconnection analysis 450
 – isolation from *Cephalosporium aphidicola* Petch 449
 – isolation from *Nigrospora sphaerica* 449
 – synthesis of 104
 – total synthesis, Corey 455
 – total synthesis, Holton 105, 461
 – total synthesis, Ireland 456
 – total synthesis, McMurry 451
 – total synthesis, Trost 451
 D-arabinose
 – Kiliani–Fischer chain extension 24
 – proof of stereochemistry 25
 arboflorine 849, 850
 arborescin 278, 295
 arene–olefin cycloaddition 241, 389, 390, 420
 – in retigeranic acid synthesis 400
 – photochemical 372
 – in cedrene synthesis 239
 aromadendrene 277, 278
 (–)-aromadendrene 325
 aromatic dihydroxylation 136
 aromatic substitution
 – photostimulated 663
 aromatin 278
 aromatization 854
 aspartyl protease
 – inhibition of 911
 aspidoalbine 760
 aspidophytine 780
 – total synthesis, Padwa 779
Aspidosperma alkaloids 761, 763, 764, 820
 – approaches to 775
 – general method of synthesis 769, 770, 772, 773, 776, 794
 – structure elucidation 780
 – chemical interconversion of 764
 aspidospermidine 530, 760, 761, 764, 770, 772, 773, 776, 780, 794, 815
 – bibliography 826
 – conversion to vincadifformine 773
 – disconnection analysis 765
 – total synthesis, Aube 773
 – total synthesis, Heathcock 775
 – total synthesis, Kutney 775
 – total synthesis, Magnus 775
 – total synthesis, Schultz 786
 – total synthesis, Wenkert 767
 – total synthesis, Zard 775

- (-)-aspidospermidine
 - asymmetric synthesis of 786
- aspidospermine 531, 759, 760, 780, 921
 - bibliography 826
 - comparison of Stork's and Ban's intermediates 767, 768
 - dehydrogenation with zinc dust 31
 - disconnection analysis 765
 - Emde degradation of 34
 - fragmentation of 32
 - Hofmann degradation of 34
 - isolation from *Aspidosperma quebracho blanco* 764
 - oxidation of 32
 - structure proof 23, 31
 - total synthesis, Stork 765
 - X-ray structure 32
- Asteraceae families of plants
 - source of pyrrolizidine alkaloids 617
- asymmetric oxidation 54, 110, 112, 117, 118
- asymmetric reduction 110
 - of enones 667
 - with chiral oxazaborolidine catalysts 110, 488, 667
- atom economy 96, 727
 - definition of 97
- atom transposition
 - in cyclic compounds 176
- atropine 529, 531
- atropoisomerism
 - in vancomycin 873
 - in pancratistatin synthesis 698
- australine 639, 641
- (+)-australine
 - total synthesis, Denmark 639
- azabicyclo[3.3.0]octane 619
 - disconnective strategies 620
- aza-Diels–Alder reaction
 - in daphnilactone synthesis 609
- azadiene formation 609
- aza–ene reaction
 - of acyliminium ion 627
- azaspiracid-1 6
 - structure revision 5
- aza sugars
 - synthesis of 155
- azide–diene cycloaddition 636
- N*-aziridinyl imine
 - in radical cyclization 267
 - synthesis 244
 - radical cascade of 243, 246
- azulene
 - from oil of chamomile 277
- b**
- baccatin III 13, 499, 500
 - esterification of 507
 - symmetry-based design 151
- Baeyer–Villiger reaction 118, 308, 309, 321, 485, 555, 556, 557, 560, 579, 705, 720
 - asymmetric 59
 - Hudrlik silicon-directed version 785, 786
 - in eburnamonine synthesis 786
 - in quassin synthesis 483
- baker's yeast reduction
 - of keto esters 639
- barbatusol 488
- Barton–McCombie deoxygenation 246, 381, 383, 388, 404, 409, 419
- Barton reaction 112
- Baylis–Hillman reaction 578
 - of ethyl acrylate with *m*-methoxybenzaldehyde 577
- Beckmann rearrangement 47, 48, 595, 800
 - in ibogamine synthesis 799
 - of dihydrocodeinone oxime 30
 - Barton nitron version 311, 313
- benzene
 - chemical oxygenation of 119
 - synthesis from acetylene 214
 - asymmetric dihydroxylation of 118
- benzocyclobutane
 - cycloreversion 114
 - in steroid synthesis 209
- benzyl ether
 - deprotection with BBr₃ 352
- N*-benzoylmerquinene 537
- o*-benzyloxime 709
- benzyne alkylation
 - intramolecular 661
- benzyne generation
 - with sodium or potassium amide 663
- Bergman cycloaromatization
 - of ene-diyne subunit 873
- Beyermann–Grewe cyclization 737
- bicyclic ketones
 - stability relationships in 177, 179, 180, 181, 279

- bicyclo[2.2.1]heptane
 – fragmentation of 308
 – in hydrazulene synthesis 307
- bicyclo[2.2.2]octanone
 – via a Diels–Alder reaction 560
- bicyclo[2.2.2]octene
 – cleavage of 484
- bicyclo[3.2.1]octanone
 – synthesis of 463
- bicyclo[3.2.1]oxaoctane
 – in phorbol synthesis 470, 471
- bicyclo[3.3.1]nonanone
 – synthesis of 586
- bicyclo[3.3.0]octanes
 – energy differences 178
- bicyclo[5.3.0]decanones
 – energy differences 180, 279
- bicyclo[5.3.0]nonanones
 – energy differences 179
- bicyclo[5.4.0]azaundecane ring system
 – conversion to isoguinaclidine 800
- bicyclo[6.3.0]undecanones
 – energy differences 181
- S-BINOL
 – in asymmetric Diels–Alder cycloaddition 798
- biocatalysis and directed evolution 59
- biogenetic cyclization
 – of acoranes to cedrenes 231
- biogenetic relationship
 – acoranes, cedranes, and zizaanes 235
- biomimetic cyclizations
 – in acorane ring systems 236
 – in steroid synthesis 210
 – in synthesis of aphidicolin 455
- biosynthesis of indole alkaloids
 – Wenkert's original hypothesis 761
- Birch reduction 50, 51, 260, 282, 305, 306, 456, 457, 576, 579, 736, 737, 740, 854
 – asymmetric 785, 786
 – of anisole 259
 – of gallic acid 853
 – of *p*-methylanisole 218
 – of phenyl ethers as means of deprotection 280
- Bischler–Napieralski reaction 47, 48, 50, 543, 547, 551, 553, 699, 711, 713, 736, 737, 761
 – in 7-deoxypancratistatin synthesis 702
 – via isocyanate 701
- bis(dihydroquinidino)–phthalazine
 – in asymmetric amino-hydroxylation 641
- 1,2-bis(trimethylsiloxy)cyclobutane 663
- Bohlman–Wenkert bands
 – IR frequencies 576
 – in structure elucidation of heterocycles 575
- bond-set analysis 130
- Boraginaceae families of plants
 – source of pyrrolizidine alkaloids 617
- (–)-borneol 507, 517, 518
- Bredt's rule 588
- brevenal 874
 – biological activity 877
- brevetoxin 850, 873, 921
 – biological activity 877
- brevetoxin A 874, 924
 – bibliography 881
 – from *K. brevis* 874
 – total synthesis, Nicolaou 877
- brevetoxin B 43, 46, 90, 874
 – bibliography 881
 – total synthesis, Kadota & Yamamoto 877
 – total synthesis, Nakata 877
 – total synthesis, Nicolaou 877
- brevetoxins
 – biological activities of 874
 – isolation 874
- brevity
 – in reaction design 95
- brevity of execution
 – discussion of 89
- bridgehead enone
 – synthesis of 586
 – in lycopodine synthesis 585
- α -bromination
 – of amide 591
- bromination
 – of ketone, acid catalyzed 735
- N-bromination 536
- α -bromoenone synthesis 667
- β -bromoethyl benzene
 – enzymatic dihydroxylation of 744
- bromohydrin synthesis 546
- o*-bromotoluene
 – lithiation of 372
- Brown hydroboration 56
- brucine 528, 801
 – isolation from *Strychnos ignatii* 800

- isolation from *Strychnos nux vomica* 800
- Buchner–Curtius–Schlotterbeck reaction 263
 - in khusimone synthesis 262
- bulgarsenine 617, 618
- bulnesene 280
 - disconnection analysis 281
- α -bulnesene 283, 286, 287, 288, 291
 - total synthesis, Heathcock 286
 - total synthesis, Mehta 290
 - total synthesis, Piers 281
- β -bulnesene 287
 - total synthesis, Oppolzer 290
 - total synthesis, Sammes 293
- bulnesol 213, 278, 282, 285, 286, 287, 288, 324
 - total synthesis, Heathcock 286, 287
 - total synthesis, Marshall 280
 - total synthesis, Yoshikoshi 284
- Burgess dehydration 505
- Burgess reagent 240, 242, 298, 299, 505, 507, 706
 - for olefin synthesis 708
- t*-butanol 42
- butenolide
 - by selenoxide elimination 316
 - from furans 320
 - synthesis from keto acids 309
- n*-butyl lithium borohydride
 - enone reduction with 856
- 1-butyne
 - Suzuki cross-coupling with vinyl bromide 798
- c**
- CAD technology 133
- caffeine 528
- calicheamicin γ_1^I 43, 46, 847, 848, 872
- C-alkylation
 - of 1,3-diketone 487
- calystegine
 - chemoenzymatic synthesis of 117
- CAMEO programs 130
- camphor 42, 502, 921
 - as chirality source in taxane synthesis 517
 - as chiral starting material in total syntheses 271
 - synthesis of 41, 207
- (+)-camphor 504, 517, 518
 - oxidation to camphorquinone 516
- (–)-camphor 504, 507, 517, 518
- camphorsulfonic acids 262

 – total synthesis, Denmark 639
 epiaustraline
 – total synthesis, Denmark 639
 – total synthesis, Han 640
 epi- β -bulnesene
 – total synthesis, Ovaska 293
 – total synthesis, Sammes 293
 epiibogamine 792
 epiisocomene 377, 378, 379
 – total synthesis, Hudlicky 377
 β -epiisocomene 378, 379, 380
 – ozonolysis of 380
 – total synthesis, Hudlicky 377
 epikessane 290
 12-epi-lycopodine 574
 – synthesis of 585
 – Wiesner's synthesis of 587, 589
 epimerization
 – of C-14 in morphine 735
 epizisaene 256, 261
 – total synthesis, Wiesner 257
 epizizanoic acid 256
 – synthesis from khusimone 262, 264
 – total synthesis, Yoshikoshi 256
 epoxidation
 – hydroxyl-directed 503
 – of enones, with *t*-butyl hydroperoxide 343
 epoxidation of allylic alcohol
 – with *t*-butyl peroxide and oxyvanadium(IV)bis(acetylacetone) 859
 epoxide synthesis 707
 – from ketones, with dimethyl sulfonium methylide 262
 – from diols 438
 epoxy alcohol fragmentation
 – in synthesis of taxanes 504, 506, 511
 – in taxol synthesis 511
 – Lewis acid catalyzed 503
 α,β -epoxyamide synthesis
 – in annottinine synthesis 592
 epoxy ketones
 – hydrazine reduction of 313
 – reduction of 344
 equatorial reduction
 – stereocontrol, with L-selectride 459
 equilenin 14, 41, 43, 208, 921
 – total synthesis 7
 equilibration of aspidospermidines
 – via retro-Mannich reaction 772
 equilibrium
 – of aspidospermine and quebrachamine 767
 erythromycin 845
 – control of stereochemistry of the *seco*-acid 869
 – derivatives of 867
 – synthesis by fermentation 867
 – Woodward's iterative strategy 868
 erythromycin A 807, 868
 – total synthesis of 867
 erythromycin B 868
 – formal total synthesis of 867
 erythronolide A 868
 erythronolide B 42, 44, 868
 D-erythrose 638
 L-erythrose 638
 erythrose
 – synthesis from chlorobenzene 639
 L-erythruronolactone 149, 638
 – synthesis from chlorobenzene 639
 Eschenmoser fragmentation 176, 312, 314
 Eschenmoser salt 310, 311, 512, 513
 – in α -methylene lactone synthesis 300, 301, 302, 349
 Eschenmoser thioimino ester rearrangement 633

- estafiatin 213, 278, 280, 295, 303

quaternary ammonium salts

– reductive cleavage of 773

quaternary salt of β -carboline derivatives

– reductive or alkylative
 cleavage of 796

quebrachamine 760, 761, 764, 770, 772, 773, 794, 795

– comparison of Stork's and Ban's
 intermediates 768
 – oxidation of, to chloroindolenine 797
 – total synthesis, Kutney 775

quinidine 532

quinine 41, 43, 528, 529, 531, 532, 537, 802, 804, 921, 924

– bibliography 566
 – conversion of quinotoxine 537
 – disconnection analysis 533
 – formal syntheses 532
 – isolation of 531
 – Roche synthesis of 538

– structure elucidation 531, 532

– synthesis 7, 41

– total synthesis, Stork 539

– total synthesis, Woodward 534

quinolone synthesis 578, 767

– mechanistic options 813

quinotoxine 532, 537, 921

– conversion to quinine 533, 534

– N-bromination 534

– synthesis of 534

quinuclidine synthesis 540

r

radical addition 400

– to acetylene 438

radical cascades 113, 710, 740

– in synthesis of Amaryllidaceae
 constituents 267

– of aziridinyl imine 702

– in cedrene synthesis 230, 243

– in morphine synthesis 739

– in steroid synthesis 209, 212

– in zizaene synthesis 267

– of aziridinyl imines 270

– photochemical 710

radical cyclizations 113, 710, 740

– endo cyclizations 671

– 5-exo-7-endo 302

– mechanism of 244, 269, 710

– in 7-deoxypancratistatin synthesis 702

– in synthesis of (–)-estafiatin and

(+)-cladantholide 303

– intramolecular of bromo acetal 560

– in triquinane design 363

– of Stork's bromoacetal 303

– tin-mediated 303

radical dehalogenation 697

Ramberg–Bäcklund reaction 51

ramoplanin 873

Raney nickel 639

– discovery of 51

Raney nickel reduction 534

Rauwolfia alkaloids 541

reaction environment

– control of 172

reaction mass efficiency (RME)

– definition of 97

reaction space 129, 149

– definition of 82

reaction yield

- definition of 97
- reporting of 120

reagent space 147

rearrangements

- of allylic carbinol 806
- of intermediates in Büchi's ibogamine synthesis 793, 794

reduction

- catalytic 110
- of amide to aldehyde 697
- of aryl halide 735
- of enone, asymmetric 667
- of 1,4-enones 297
- of enones, with dissolved metal 452
- of indolyl ketone 771
- of nitrile to aldehyde 308
- of the N–O bond with samarium iodide 709
- of benzamide to aldehyde 698

reductive amination 51, 630, 639, 663, 664, 741, 742

reductive coupling

- of α -diketone with nitrile 734

reductive cyclization

- of nitro esters with copper chromite 629

reductive detosylation 739, 740

reductive formylation 452

reductive $S_{RN}1$ reaction 661

redundant operations or reactions

 - biological activities 761
 - in extracts of *Catharanthus roseus* 788
- vindoline 760, 764, 773, 776, 780, 789
 - bibliography 826
 - cycloaddition approaches to 779
 - overview of strategies for 777
 - total synthesis, Boger 779
 - total synthesis, Büchi 777
 - total synthesis, Kuehne 777
 - total synthesis, Kutney 777
- vinylaziridine–pyrroline rearrangement 623, 624, 635
 - in pyrrolizidine alkaloid synthesis 635
 - lithium iodide mediated 625
 - trimethylsilyliodide mediated 625
- vinylaziridines
 - additions of nucleophiles to 698
 - cuprate addition to 693, 697
 - rearrangement of, to pyrrolines with TMSI 810
 - synthesis of 624
- vinylboronic acid
 - in playtoxin synthesis 900, 901
- vinylcyclopropane–cyclopentene rearrangement 56, 59, 102, 139, 141, 249, 375, 379, 385, 404, 408
 - discovery of 634
 - degenerate version of, in isocomene synthesis 372
 - in aphidicolin synthesis 451
 - in specionin synthesis 625
 - in triguinane synthesis 363, 374, 375, 621
 - low temperature version 625
 - in retigeranic acid synthesis 400
 - photochemical (degenerate) 373
 - rhodium-mediated 384
 - thermal by FVP 384
- vinylcyclopropanes
 - pyrolysis of 407
 - synthesis of 452
- vinyl ether synthesis
 - from allylic alcohol 454
- vinylous acid chloride
 - reduction with zinc–copper couple 580
- vinylous amide synthesis 633
- vinylous Reformatsky reaction
 - in cedrene synthesis 234
 - in pyrrolizidine alkaloid design 624
 - in triquinane design 375
- vinylous urea synthesis 902
 - in palytoxin synthesis 895
- vinylsilane cyclization
 - in compactin synthesis 443
- vinyl stannane
 - in pancratistatin synthesis 699
- Vitamin B₁₂ 41, 44
- Vitamin B₁₂ 807
- Vitamin D 349
- vittatine 689, 691
- von Braun degradation
 - of aspidospermine 32
- vulnerability 129
- Vycor columns
 - conditioning with PbCO₃ for pyrolysis 384, 412
 - in flash vacuum pyrolysis 376, 404

- Vycor glass
– for flash vacuum pyrolysis, PbCO_3 -treated 384
- w**
- Wagner–Meerwein rearrangement
– in bulnesol synthesis 282
– solvolysis 285
- Wagner–Meerwein shift 36, 284, 287, 292
- Weinreb amide 472
- Weinreb–Dolby enamine 658, 659
- Wender [5+2] cycloaddition 56
- Wenkert–Bohlmann bands 35
- Wharton olefination 313
- Wharton reduction 311, 312
- Wharton transposition 314
- whole cell fermentation
– of aromatic compounds 696
- Wichterle reaction 325
- Wieland–Gumlich aldehyde 802
– in strychnine biosynthesis 802
- Wieland–Mischler ketone 288, 451
– *R*-(–)-enantiomer of 483
– in bulnesol synthesis 284
- Wilkinson catalyst 50, 281, 283
– decarbonylation of aldehyde 387, 705
- Wittig reaction 53, 56, 258, 261, 293, 298, 386, 347, 388, 394, 402, 440, 456, 513, 539, 540, 556, 631, 635, 699, 896, 899
– Conia–Dauben-modification of 89, 256
– in palytoxin synthesis 897, 899
– with diethyl [(thiophenyl)methyl]-phosphonate 739
- Wittig reaction (Horner–Emmons modification) 406, 901
– in palytoxin synthesis 895
- Wittig rearrangement 51
- Wolff–Kishner reduction 240, 241, 290, 369, 370, 397, 451, 453, 486, 487, 733, 734, 791
– in ibogamine synthesis 792
– Kabalka modification 394, 396
- Wolff rearrangement 51, 366, 458
– in ring contractions 366
- x**
- xanthate synthesis 244
– from alcohols 441
- xestocyclamine 849, 850
- y**
- Yamada reagent 697
- yeast-mediated reduction
– of keto esters 639
- yessotoxin
– from *Protoceraium reticulatum* 877, 878
- yield
– current definitions 97
- yield calculations
– for multistep synthesis 91
- yield optimization 93
- yohimbane
– alkaloids synthesis 195
- yohimbine 541, 542, 559, 761
- 17-yohimbone 357
- yuzurimine 603, 604
- Ψ -vincadifformine 780
– total synthesis, Kuehne 778
- z**
- zaluzanin C 278, 295
- zampanolide 871
– synthesis of 869
- zaragozic acid 847
- zaragozic acid C 848
- zinc–acetic acid reduction
– in ibogamine synthesis 792
- zinc–copper couple
– in vinylogous Reformatsky reaction 622
- zinc-mediated reduction
– of acetoxy ketones 549
– of bromo lactones 549
– of β -halo ethers 549
- zizaene 213, 255, 256, 262, 267
– bibliography 272
– disconnection analysis 257
– formal syntheses of 256
– isolation from vetiver oils 255
– structure 255
– total synthesis, Kim 267
– total synthesis, Wiesner 257
- zizaene (khusane) sesquiterpenes 256
- zizanoic acid 213, 255, 256
– disconnection analysis 257
– formal syntheses of 256
– from khusimone 264
– structure of 255
– synthesis from khusimone 262
